

# Build LIPUMA sales management website

NGUYEN THI HUYEN  
Computer Science

Hanoi University of Industry

## INTRODUCTION

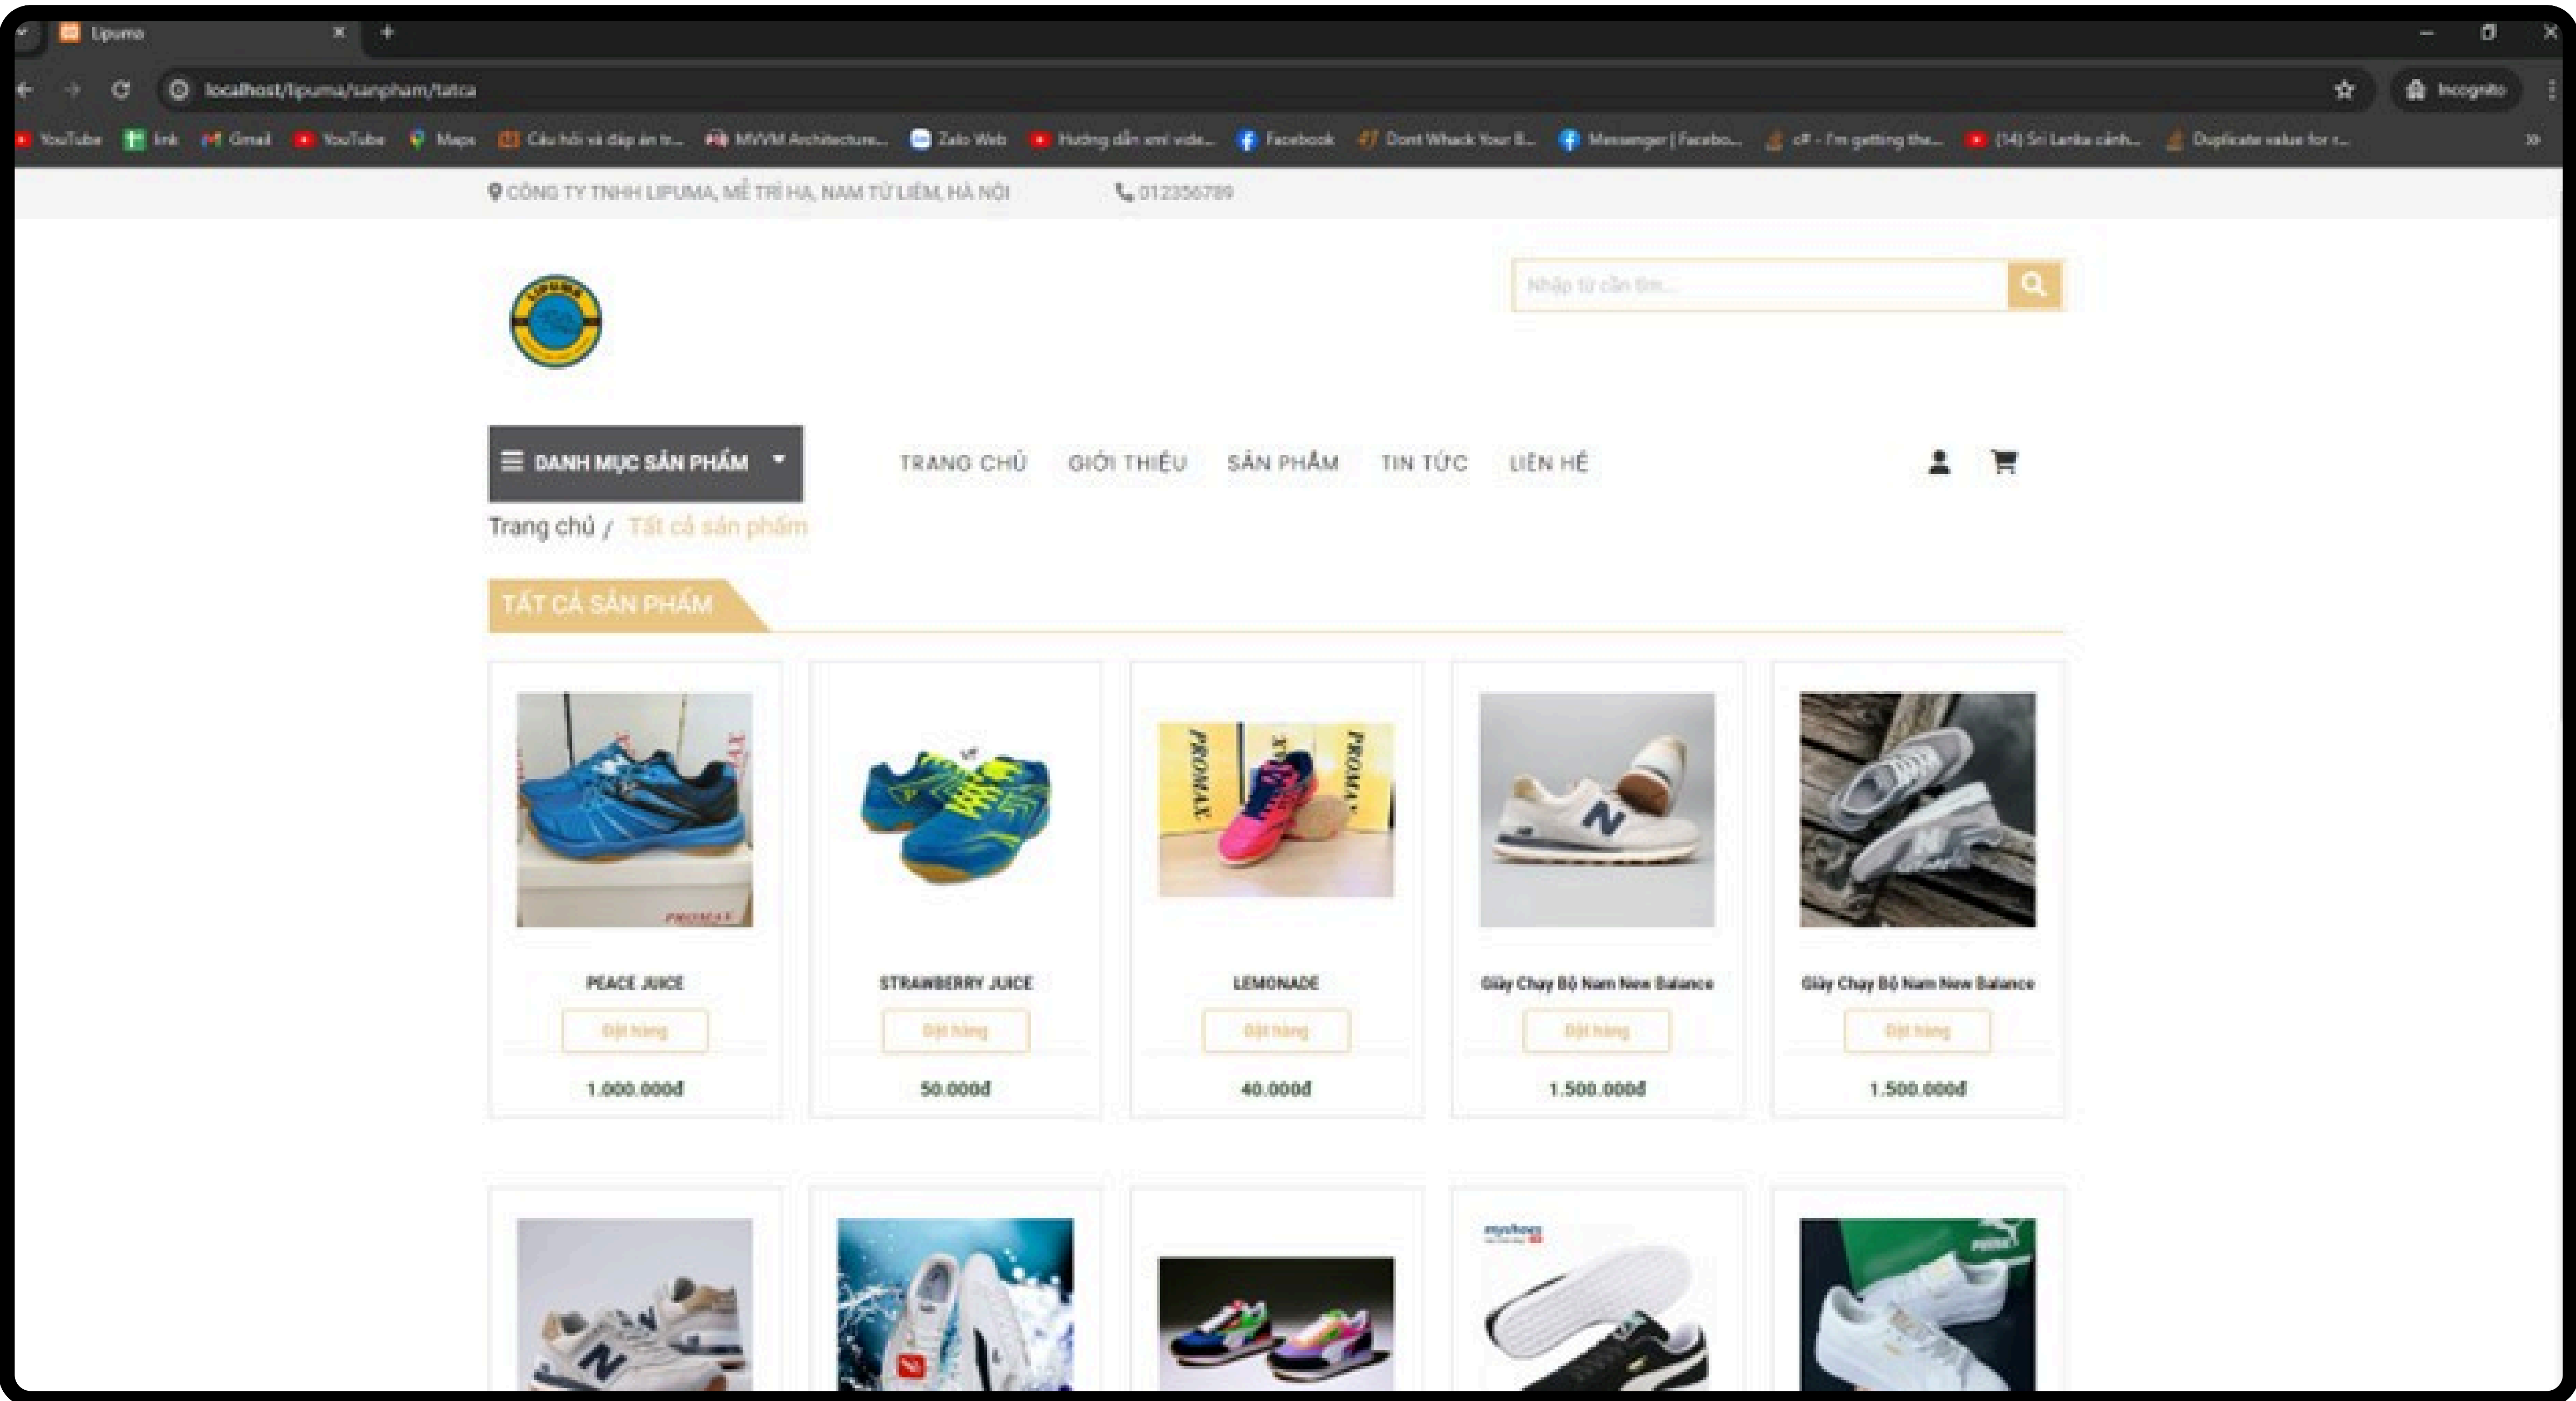

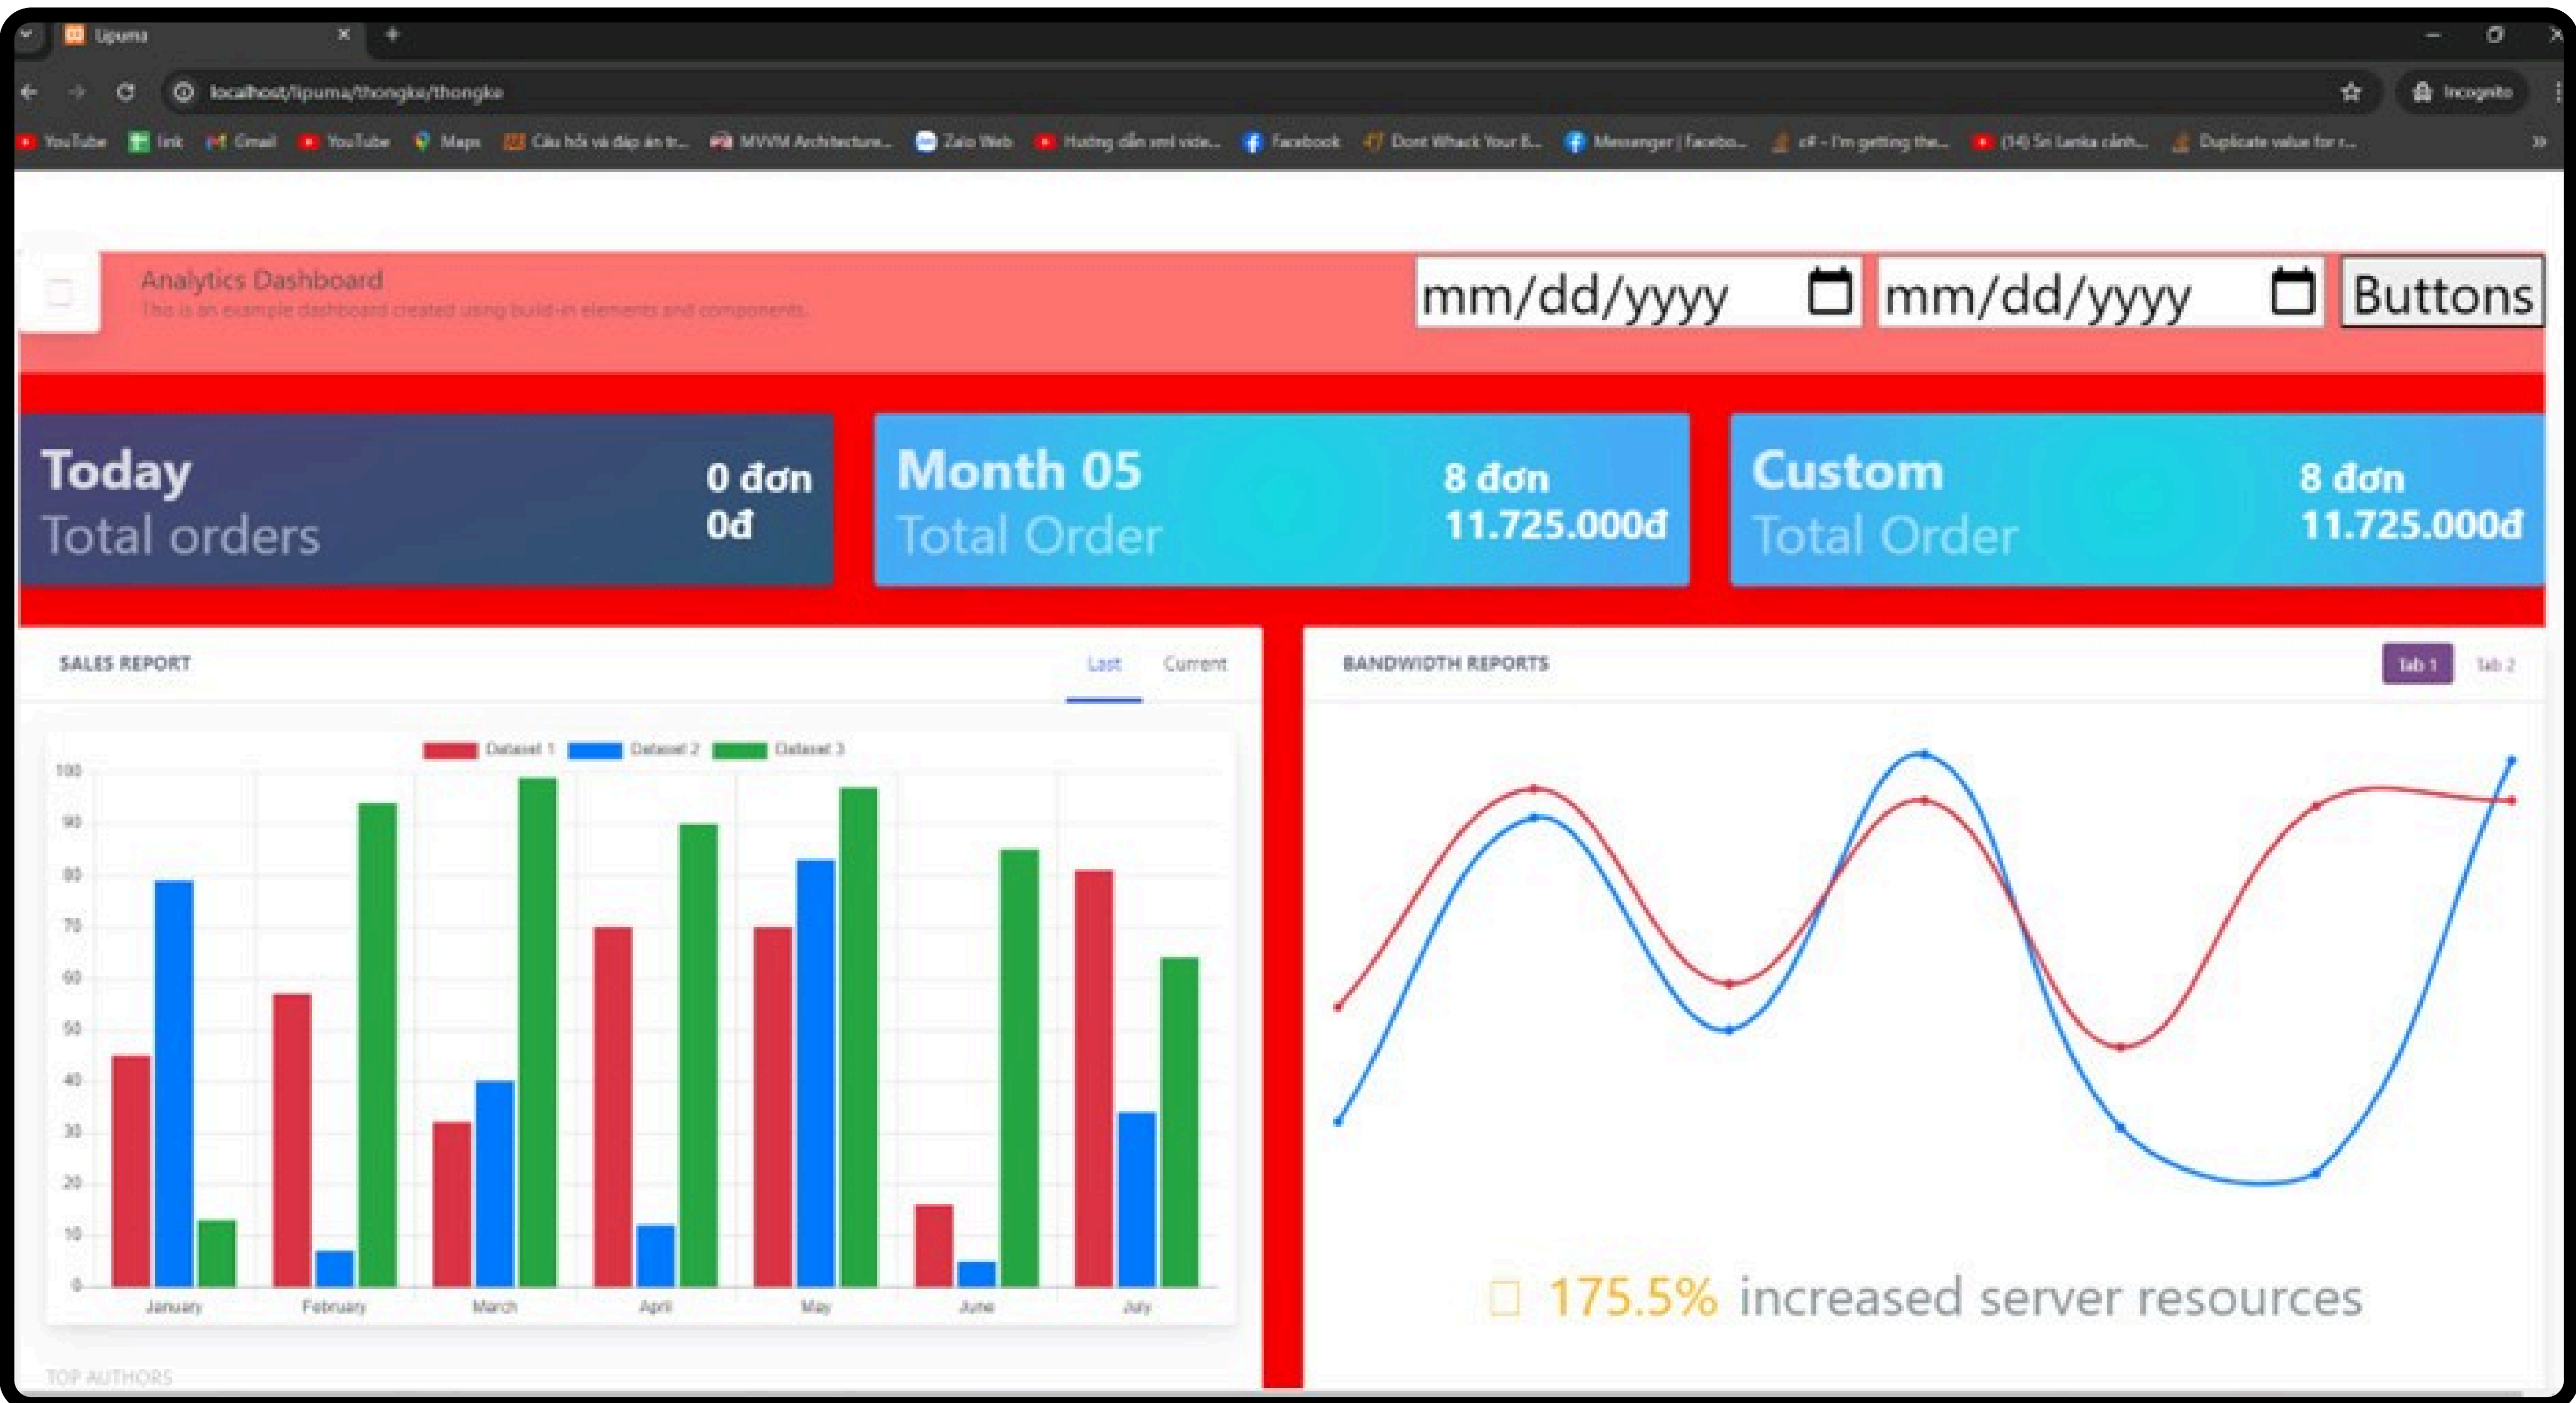

In the era of rapid digital technology development, e-commerce websites have become an indispensable tool for businesses and individuals seeking to reach a broader and more diverse market. An e-commerce website is an online platform that allows businesses and individuals to showcase, introduce, and sell their products or services to customers conveniently and efficiently.

## MATERIALS AND METHODS

- Designing user interfaces using HTML, CSS, and JavaScript
- Programming backend functionalities with PHP
- Storing data with MySQL and building upon the MVC model

## RESULTS AND DISCUSSION

## CONCLUSION

The program has been completed, providing a good understanding of website building tools and design with a user-friendly interface. The website increases work efficiency and allows users to easily view and order products online. However, the development process encountered many errors and the functionalities are still limited. The future goal is to develop the website with higher functionality and larger scale to attract users.
